

EXPERIMENT 07

Integrating a Zoho Creator Application with Another Zoho Service Using Connections and API

Loan Management System - Zoho Calendar Integration Use Case

Karpaga Sundari V

241401037

1. Aim

To integrate the Loan Management System built in Zoho Creator with Zoho Calendar, by creating an authorised connection and calling the Zoho Calendar API through a Deluge script in a workflow, so that an event is added to the calendar the moment a borrower submits the Loan Application form with consent.

This removes the need for loan officers to enter every appointment into the calendar by hand, keeping the schedule consistent with the data captured in the application.

2. Procedure

Step 1: Open Microservices - From the Develop section of the Zoho Creator workspace, the Microservices page was opened. Microservices are modular components used to connect with third-party apps; Create New was selected.

Step 2: Choose Connections - In the Create New Microservice dialog (AI Models, AR Library, Connections, Datasources, Custom API), Connections, "Connect apps with third-party services", was selected using Pick & Create.

Step 3: Configure the Zoho Calendar connection - In the Zoho Calendar - Add Connection form, the Connection Name was set to zoho_calendar_connection, Authorization Access to Administrators only, Connection Mode to Quick connect (Zoho credential), and the credentials were enabled for All Actions. The connection was then submitted with Create And Authorize.

Step 4: Authorise Creator - On the consent screen, Creator requested access to Calendar operations (add calendar, add event, get calendar and event details, free/busy, search events, update calendar and event). The consent checkbox was ticked and Accept

was clicked.

Step 5: Enable the connection for the application - In the connection's Connection Access panel the link name was `zoho_calendar_connection1`, with permissions Create Calendar, Create Event and Get all Calendar. Access was switched On for Loan Management System.

Step 6: Create the workflow - A new workflow named `Sync_Loan_Appointment_To_Zoho_Calendar` was created on the Loan Application form, with Record Event set to Created and Form Event set to Successful form submission.

Step 7: Write the Deluge script - A Deluge action was added. If `consent_for_credit_check` is true, the script formats the preferred date (`yyyyMMdd`) and time (colons removed), builds the start value with the +0530 offset, fills a `dateandtime` map (timezone Asia/Calcutta), creates the event title "Loan Appointment" followed by the applicant's name, and calls `zoho.calendar.createEvent` with the calendar ID, the event map and the connection link name `zoho_calendar_connection1`. The API response is shown using `info`.

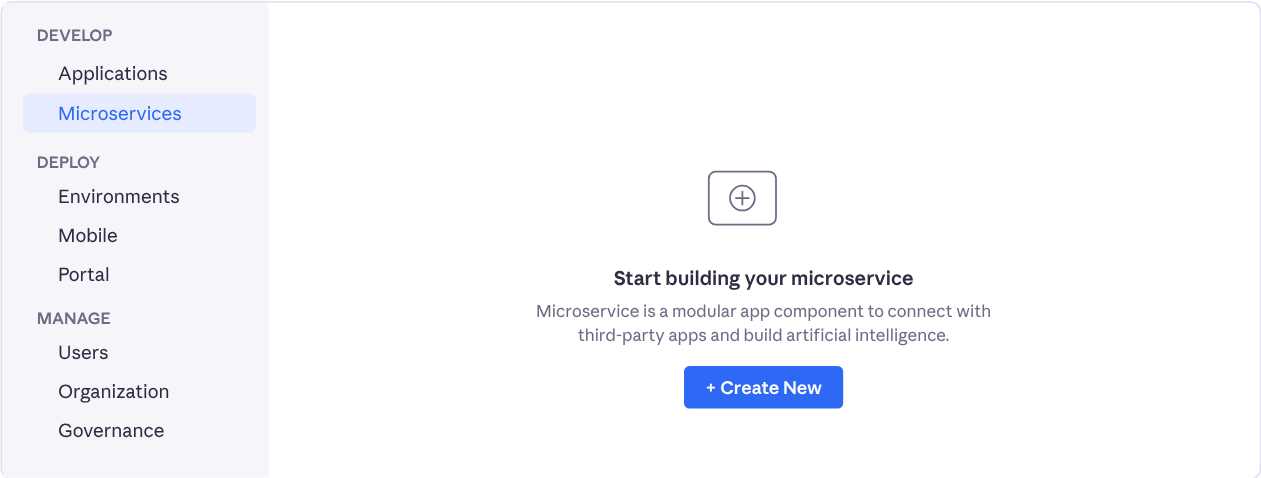

Step 8: Save the action - The script was saved with Update, attaching it under Loan Application › Created › Successful form submission › `Sync_Loan_Appointment_To_Zoho_Calendar`, so that it runs on every valid new submission.

3. Output

The figures in this record are illustrative representations drawn with sample values; they are not screenshots of the application.

3.1 Opening the Microservices section

The Microservices page is empty and offers Create New

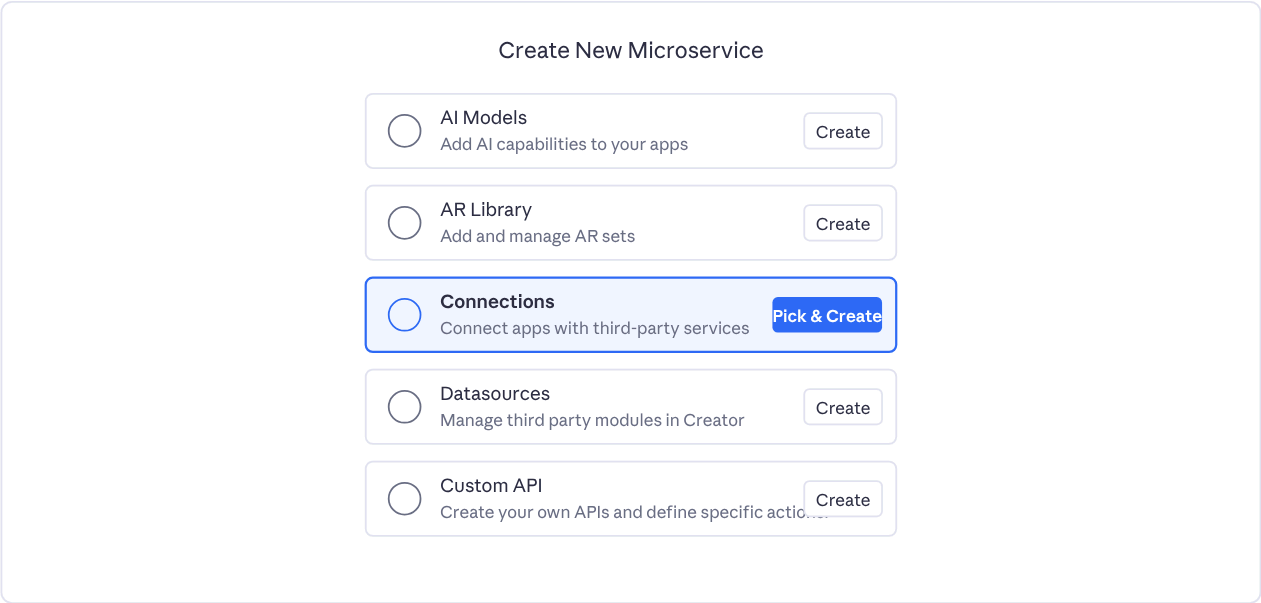

3.1 Microservices page (illustrative)

The Microservices page, reached from the Develop menu, is empty and offers Create New to start building a microservice for connecting with third-party apps.

3.2 Choosing the Connections microservice

Connections is the microservice that links the app to another Zoho service

3.2 Create New Microservice dialog (illustrative)

The Create New Microservice dialog lists AI Models, AR Library, Connections, Datasources and Custom API. Connections is highlighted because it links the application to an external Zoho service.

3.3 Adding the Zoho Calendar connection

The connection form is set to Quick connect with All Actions enabled

☐ Zoho Calendar - Add Connection

By creating a Zoho Calendar connection, you authorize Zoho Creator to exchange data with Zoho Calendar.

Connection Name *
zoho_calendar_connection

Authorization Access *
☒ Administrators only ☐ All logged-in users

Connection Mode *
☒ Quick connect (Zoho credential) ☐ Custom (Your credential)

Advanced

Use these credentials to enable access to *
☒ All Actions ☐ Only Specific Actions

View Selected

Calendars

Create Calendar

Create And Authorize

Cancel

3.3 Zoho Calendar Add Connection form (illustrative)

The Add Connection form shows the connection name zoho_calendar_connection, Administrators-only access, Quick connect mode and All Actions enabled, ready for Create And Authorize.

3.4 Authorising Creator to access Zoho Calendar

Accepting the consent screen authorises the Calendar operations

ZOHO

Creator

Published by Zoho

Creator would like to access the following information.

☐

Calendar

Add new calendar details

Add event

To get calendar details

To get event details

To get freebusy for the user

To get events list based on search criteria

Update calendar details

Update event

☒

I allow Creator to access the above data from my Zoho account.

Accept

Reject

3.4 Consent screen (illustrative)

The consent screen lists the Calendar operations Creator will be allowed to perform. Accepting it completes the authorisation of the connection.

3.5 Connection details and access

The connection is enabled and switched on for the Loan Management System

<- ☐ Zoho Calendar Connection

Enabled ...

Service Name
Zoho Calendar

Link Name
zoho_calendar_connection1

Permission
Create Calendar,Create Event,Get all Calendar

Authorization

Use Per-Environment

Same for all the environments

Authorization Owner
Administrator

Connection Access

Turning on Connection Access allows other users to use this connection on the applications listed below

LMS

Loan Management System

No References

On

3.5 Connection details and access (illustrative)

The saved connection shows Service Name Zoho Calendar, link name zoho_calendar_connection1 and permissions Create Calendar, Create Event and Get all Calendar. Access is On for Loan Management System, so its Deluge scripts can use the connection.

3.6 Creating the workflow

The workflow runs on a successful submission of the Loan Application form

Run workflow on any event in the form

Choose form

Loan Application

Run when a record is (Record Event)

Created

Edited

Created or Edited

Deleted

When to trigger workflow (Form Event)

Successful form submission

Name the workflow

Sync_Loan_Appointment_To_Zoho_Calendar

Create Workflow

3.6 New workflow screen (illustrative)

Page 6 of 8

The new-workflow screen shows the form Loan Application, Record Event Created, Form Event Successful form submission, and the workflow name Sync_Loan_Appointment_To_Zoho_Calendar.

3.7 Deluge script calling the Zoho Calendar API

The Deluge script creates a calendar event only when consent is given

Deluge Script
 Loan Application > Created > Successful form submission > Sync_Loan_Appointment_To_Zoho_Calendar

Deluge Condition if else if else conditional if Data Access add record fetch records Miscellaneous set variable call function send mail	<pre> 1 if(input.consent_for_credit_check == true) 2 &#123; 3 date_text = input.preferred_appointment_date.toString("yyyyMMdd"); 4 time_text = input.preferred_appointment_time.toString(); 5 time_text = time_text.replaceAll(":", ""); 6 7 start_text = date_text + "T" + time_text + "+0530"; 8 9 dateandtime_map = Map(); 10 dateandtime_map.put("timezone", "Asia/Calcutta"); 11 dateandtime_map.put("start", start_text); 12 13 eventDetails = Map(); 14 eventDetails.put("estatus", "added"); 15 eventDetails.put("title", "Loan Appointment - " + input.applicant_name); 16 eventDetails.put("dateandtime", dateandtime_map); 17 18 event = Map(); 19 event.put("eventdata", eventDetails); 20 21 response = zoho.calendar.createEvent(22 "your_calendar_id", 23 event, 24 "zoho_calendar_connection1" 25); 26 27 info response; 28 &#125; </pre>
--	--

Update

Cancel

3.7 Deluge script editor (illustrative)

The Deluge editor shows the script. It runs only when consent_for_credit_check is true, converts the preferred date and time into the required start format, builds the event maps, and creates the event with zoho.calendar.createEvent using the connection zoho_calendar_connection1.

4. Final Result

A connection to Zoho Calendar was created, authorised and enabled for the Loan Management System, and a workflow on the Loan Application form was built that uses it through a Deluge script and the Zoho Calendar API.

On every successful new submission with consent given, the workflow builds the event start time from the preferred appointment date and time (Asia/Calcutta, +0530), titles it "Loan Appointment" followed by the applicant's name, and creates it in Zoho Calendar without manual entry by the loan officers.

The exercise met its objective: a Zoho Creator application was integrated with another Zoho service using connections and an API call from Deluge, so appointment data now flows automatically into the calendar.
